

Title: Book Recommendation System

Problem Statement: Given book writer's name or genre name the system will suggest a book name of respective writer or genre.

Objective: The objective is to prepare an automated system which can recommend books based on a person's interest using Artificial Intelligence in Prolog environment.

Design: The system is divided into two parts. One suggests genre based on the mood of the user and age. The other suggests book name based on the writer's name or genre name.
